Erratum**Retrospective Analysis of Therapeutic Drug Monitoring Data for Treatment of Bipolar Disorder with Lamotrigine**

S. Unholzer, E. Haen

Pharmacopsychiatry 2015; 48: 211–214

DOI 10.1055/s-0035-1559635

Dear reader,

there was a misunderstanding in our article. In the discussion (page 213, second paragraph, lines 6–7) we stated that “Kagawa et al. even suggested a lamotrigine concentration above 12,700 ng/mL”. But the unit in their article is $\mu\text{mol/L}$. $12.7 \mu\text{mol/L}$ is equal to $12,700 \text{ nmol/L}$ which is equal to 3252 ng/mL . This supports our findings that lower lamotrigine serum concentrations lead to a therapeutic effect.

Kind regards

Sandra Unholzer
