

- CASE HISTORIES. Bruce E. Evans, New York, N.Y. Wellington Cavalcanti,
Rio de Janeiro, Brazil
- Case 1. 71 year old Factor VIII 2.8%
Diagnosis: five dental extractions, peripheral giant cell granuloma
Treatment: local hemostatic agents
- Case 2. 48 year old Factor VIII <1% (with inhibitor 100 B.U.)
Diagnosis: four dental extractions
Treatment: local hemostatic agents; antifibrinolytic agents
- Case 3. 36 year old Factor VIII 5.5%
Diagnosis: 3 day old tongue laceration
Treatment: cryoprecipitate infusions; antifibrinolytic agents
- Case 4. 26 year old Factor VIII <1%
Diagnosis: 3 orthodontic extractions; 4 third molar extractions
Treatment: factor VIII concentrate infusions

CLINICAL DEMONSTRATION PROGRAM

II Component Therapy Fractionation and Economics of a Regionalized Blood Delivery System

COMPONENT THERAPY FRACTIONATION AND THE ECONOMICS OF A REGIONALIZED BLOOD DELIVERY SYSTEM.
L. Aledort, Mount Sinai School of Medicine, New York, N.Y., U.S.A.

The delivery of blood and its components to a large urban area is a major challenge. Donor recruitment, processing, delivery and financial support are significant problems. The hemophilia demands in an area with over 1,000 patients heightens the problem. The evaluation and operation of such a program will be demonstrated. Emphasis on the technology of component therapy will be stressed. Blood bankers, Food and Drug Administrators, third party payers, clinicians, as well as representatives from different national blood delivery systems will speak.
