

Spreadsheet software to assess the locomotor disability: Submitting the actual software

Sir,

In a vast country like ours, we are often called upon as a part of our duty to assess disability resulting from trauma/burns in our patients. The latest guideline issued by the Government of India, for the assessment of locomotor disability, appeared as a Gazette notification in June 2001. We use this guideline regularly in our unit. During routine use we found the calculations which form a part of the guideline to be time consuming and difficult to explain in the court.

With a goal to simplify the calculation, I have previously adapted the gazette notification to a spread sheet.^[1] In a spread sheet, the calculations happen automatically and they are reproducible in the form of a printout which can easily explain how the final figure was arrived at, in the court. Further, the spread sheet makes the whole process of assessment faster and user friendly. However, in the said article^[1] although the utility of such software was presented and the software tested, it was not available for public use.

With the purpose of making this spread sheet software freely available (without any copy right) to all the care givers, who deal with trauma and burn patients and their rehabilitation,

I wish to submit the actual excel version (.xls) version of the file. I hereby submit two spread sheets, one for upper limb locomotor disability assessment and the other for the lower limb. Each of these programs was thoroughly tested for the entire range of values which are possible.

It may be noted that with the wide availability of apps which can run an .xls file in the android/iOS/windows operating systems, this spread sheet software can run on most mobile devices like the tablet and smart phone.
