Fig. 1S: HPLC profile of HE extract and scutellarin

HPLC chromatograph of HE extract (left) and scutellarin (right). Absorbance at 335 nm was used. The details of HPLC analysis was described in Materials and Methods. Arrow-head indicates the identified scutellarin. The calibration curve (y=21525x-52253) showed an excellent regression ($r^2 > 0.9998$) within the range of calibration. Scutellarin was determined as the main compound in HE extract at a concentration of about 75.9 mg/g of dried herb.
