(A)

(B)
**Fig. 1S** Curve for the dose-dependent effect of compounds 1-6 on enzyme activity. (A) For human DGAT1 enzyme activity; (B) for human DGAT2 enzyme activity.

**Fig. 2S** Overexpressed human DGAT1 or DGAT2 protein in Sf-9 cells using the Bac-to-Bac baculovirus expression system was confirmed by Western blot analysis. Each protein expression level was dramatically increased in relation to the concentration (MOI, multiplicity of infection) of DGAT1 or DGAT2 contained in the baculovirus.
