Supplementary Material

**Supplemental data** Shown are distributions of differences between 2 consecutive tidal volumes (tidal volume \(_x\) – tidal volume \(_y\)) continuously recorded through all 48 trials in 10 subjects (20 min recordings each). Differences are presented as percentage of the mean ((tidal volume \(_x\) + tidal volume \(_y\))/2)). Data are separated with respect to the performed period. Dashed lines illustrate a ± 20% margin of difference.
