A 47-year-old man was referred to our hospital for a routine colorectal endoscopy health check-up. During the endoscopy, a submucosal tumor (SMT)-like lesion with a smooth mucosal surface, approximately 10 mm in diameter and with a top pinhole-like opening in the rectum, with yellow-white liquid overflowing from the opening (▶ Fig. 1). Endoscopic ultrasonography revealed that the SMT located in the third layer was a single cystic lesion (▶ Fig. 2). The patient presented with no symptoms of abdominal pain, fever, or mucus bloody stool. Laboratory profiles were all within normal limits. An enhanced abdominal computed tomography revealed a nodule lesion in the rectum with a slight enhancement. Enlargement of the regional lymph node was not observed. The lesion was clinically diagnosed as a rectal cystic tumor with a possibility of a benign tumor. Therefore, endoscopic submucosal dissection (▶ Fig. 3) was performed after patient consent was obtained. We successfully performed an en bloc resection of the lesion (▶ Fig. 4).

The cut surface of the resected specimen revealed a unilocular cyst filled with yellow-white viscous fluid. Histologically, the mucosal layer invaginated into the submucosa of the rectum. The lumen of the lesion was entirely covered by the erosive inflammatory rectal mucosa, with abundant inflammatory exudates and necrosis. Based on these findings, a pathological diagnosis of rectal diverticulitis was made (▶ Fig. 5, ▶ Video 1).

Diverticulosis is characterized by the presence of mucosal and submucosal herniations or “pockets” [1]. Studies have reported polyp-like structures [2] and dimple-like or pillow signs [3] detected in the colon as inverted diverticula. Here, we report a rare case of rectal diverticulitis resembling a submucosal tumor with unusual endoscopic and pathological features. To our knowledge this is the first such case in the English literature.
This case indicated a consideration of diverticulitis with a differential diagnosis of rectal mucosal changes with an SMT-like appearance.
