## **Erratum**

In the paper by I. Lundquist (Horm. Metab. Res. 4: 151-158, 1972) Figure 1 B was misprinted. The correct figure looks as follows:

Fig. 1.

A. Elution diagram of acid amyloglucosidase activity on a Sephadex G-150 column. The eluate was examined for amyloglucosidase acitivity at pH 5.0 with glycogen as substrate. For further details, see the text.

B. Electrophoresis in polyacrylamide gel of purified acid amyloglucosidase. 15  $\mu$ g of the purified enzyme in 25  $\mu$ l 0.25 M mannitol was applied on the gel. Run carried out at pH 8.6, 4 mA/tube, 2 hours at +4°C.
