Enantio- and Diastereoselective Synthesis of syn- β -Hydroxy- α -vinyl Carboxylic Esters via Reductive Aldol Reactions of Ethyl Allenecarboxylate with 10-TMS-9-Borabicyclo[3.3.2]decane and DFT Analysis of the Hydroboration Pathway

Org. Lett. 2013, 15, 5436-5439.

Stereoselective Synthesis of syn- β -Hydroxy- α -vinyl Carboxylate Esters

R = Ph, Cy, (CH₂)₂Ph, CH₂OTBDPS, CHCHPh, 3-pyridyl, 2-furyl

Selected examples:

Significance: The authors report a novel enantioand diastereoselective synthesis of syn- β -hydroxy- α -vinyl carboxylate esters. The reaction proceeds via a reductive aldol reaction of an ethyl allene carboxylate with 10-TMS-9-borabicyclo[3.3.2]-decane.

Comment: The exclusive formation of syn- β -hydroxy- α -vinyl carboxylate esters can be explained by an aldol reaction via a chair-like transition state. DFT calculations suggest that the allene hydroboration involves a 1,4-reduction of the ethyl allene carboxylate with 10-TMS-9-borabicyclo-[3.3.2]decane.
