Synlett **2011**, 1993

In our published paper, we have reported the formation of hydrazine derivatives by electrophilic amination using *N*-Boc-*O*-tosylhydroxylamine. From the available literature (J. Vidal et al. *Chem. Eur. J.* **1997**, *3*, 1691; J. G. Krause et al. *Tetrahedron Lett.* **2010**, *51*, 3568; W. Hartmann *Synthesis* **1988**, 807; A. Armstrong et al. *Org Lett.* **2005**, *7*, 713), we conclude that the structures assigned are erroneous and the actual products are the isomeric urea derivatives, formed by Lossen rearrangement as shown below.
