## 2021 Eberhard F. Mammen Award Announcements: Part I—Most Popular Articles

Emmanuel J. Favaloro, PhD, FFSc (RCPA)<sup>1</sup>

<sup>1</sup>Department of Haematology, Institute of Clinical Pathology and Medical Research (ICPMR), Westmead Hospital, Westmead, New South Wales, Australia

Semin Thromb Hemost 2021;47:467–476.

Welcome to the latest of our Eberhard F. Mammen award announcements. As noted in previous editorials (► **Table 1**), Thieme Medical and Scientific Publisher, the publisher of *Seminars in Thrombosis and Hemostasis* (STH), has created the “Eberhard F. Mammen Excellence in Thrombosis and Hemostasis Awards” in honor of Eberhard F. Mammen (► **Fig. 1**) in recognition of his contribution to this field and to the journal that he both founded and steered for over three decades. These awards began in 2009, under two categories, “Most Popular Article Awards” and “Young Investigator Awards.” Accordingly, 2021 represents in excess of 10 years of award presentations (► **Table 1**). Current details and conditions of the award can be summarized as follows:

- Most popular article awards: will be awarded to the authors of the most popular articles published in STH. The awards are determined by the Editor in Chief on the basis of user statistics from Thieme e-Journals from the preceding 2 years. Prefaces, Errata, Letters to the Editor, Editorials, Commentaries, and previous award-winning articles are excluded from further consideration of these awards which currently comprise two categories: one for “Open Access” articles and another for a “General Category.” There are two major cash prizes of U.S. \$1,000 for each category. In addition, winners of the “General Category” awards are granted “Open Access” status for these articles thereafter.
- Young investigator awards: the best presentation or meeting abstract by a young investigator as presented or delivered to an international or large regional meeting on a topic related to the fields of thrombosis and hemostasis, and whose subject matter is determined to be in the spirit of Dr. Mammen. Up to six cash prizes of U.S. \$1,000 in any year. There are some additional considerations and

conditions for the award, and awardees are expected to prepare a review or other paper related to the topic of their presentation (or as otherwise agreed) for publication in STH. In general, previous award winners are excluded from a second award to enable more individuals to be recognized. After nominations are received, the awardees are selected by a vote of the Senior Editors of STH. Any potential conflicts of interest are managed by first identifying these, and then excluding those with potential conflicts from voting. Finally, given the current COVID-19 (novel coronavirus disease 2019) pandemic, many international congresses have become virtual meetings, and accordingly, virtual meeting presentations can also be considered for the award.

Further details of the awards and the award winners are posted online (<https://www.thieme-connect.com/products/ejournals/journal/10.1055/s-00000077>), and previous award winner announcements are also available in print (► **Table 1**). This includes the recent announcement of the 2020 Young Investigator Awards.<sup>1</sup>

It is, therefore, with great pleasure that we would like to announce the latest winners of the 2021 Eberhard F. Mammen awards for the most popular articles from STH for the period of 2019 to 2020 inclusive.

### 2021 “Most Popular” Article Awards

As mentioned, the “Most Popular” awards are given to the authors of the most popular articles published in STH as determined on the basis of user statistics from the publisher of this journal and covering the preceding 2-year period. Thus, the 2021 “Most Popular” awards are granted to the most popular papers from 2019 to 2020 inclusive. Previous

23. Favalaro EJ. 2020 Eberhard F. Mammen award announcements: part II—young investigator awards. *Semin Thromb Hemost* 2021;46(3): 229–237

Eberhard F. Mammen award winning articles are listed in ► **Table 2**. These articles are currently freely available under an “Open Access” status and no longer qualify for future awards, although many will continue to appear in the most popular download statistics provided by the publisher. Indeed, as expected, many of the previous award-winning

**Fig. 1** Eberhard F. Mammen (1930–2008).

articles appeared in the top 100 list (2019–2020 inclusive), with most also ranking highly, and thus still proving popular with our readership.

There is also an increasingly recognized trend to publish articles under an open-access model, and these, therefore, have an “inequitable advantage” over other “non-open access” articles in terms of potential for downloads or perceived popularity due to their open accessibility. Accordingly, the publisher of STH established a separate category of the “Most Popular” award for “Open Access” papers to supplement the original and now alternate “General Category.” Thus, the most popular papers are now listed in separate tables. ► **Table 3** lists the top 20 downloaded “Open Access” articles from STH (2019 and 2020 inclusive), as eligible for the “Open Access” award.<sup>2–21</sup> ► **Table 4** lists the top 25 downloaded non-open access articles from STH (2019 and 2020 inclusive), as otherwise eligible for the “General Category” award.<sup>22–46</sup>

**Table 2** Previous most popular award-winning papers

Year	Awarded for	Position in 2021 top 100 list
2009	Jurk K, Kehrel BE. Platelets: physiology and biochemistry. <i>Semin Thromb Hemost</i> 2005;31(4):381–392	15
2009	Girolami B, Girolami A. Heparin-induced thrombocytopenia: a review. <i>Semin Thromb Hemost</i> 2006;32(8):803–809	NL
2010	Harenberg J, Wehling M. Current and future prospects for anticoagulant therapy: inhibitors of factor Xa and factor IIa. <i>Semin Thromb Hemost</i> 2008;34(1):39–57	NL
2010	Prechel M, Walenga JM. The laboratory diagnosis and clinical management of patients with heparin-induced thrombocytopenia: an update. <i>Semin Thromb Hemost</i> 2008;34(1):86–96	NL
2010	Fareed J, Hoppensteadt DA, Fareed D, et al. Survival of heparins, oral anticoagulants, and aspirin after the year 2010. <i>Semin Thromb Hemost</i> 2008;34(1):58–73	NL

Abbreviation: COVID-19, novel coronavirus disease 2019.

<sup>a</sup>2019–2020 inclusive. Ranking is according to download data provided by journal publisher, and includes nonqualifying material (e.g., Letters to the Editor and Commentaries) for “Most Popular” awards. All COVID-19 related material provided as free to download by Thieme.

I will note that although I was a coauthor of one of the award-winning articles, my relative contribution was minor in comparison to the lead author, and I will of course decline to receive any of the award prize.

As always, and irrespective of any personal involvement in the writing of papers that are published in this journal, I always get considerable satisfaction in announcing these awards. This year also saw that one lead author, Robert C. Gosselin, wins two of the top prizes for separate papers published in separate years.<sup>2,3</sup> Indeed, one of these papers was published in 2020,<sup>2</sup> and so is especially deserving, given the later publication of the 2-year, 2019 and 2020, capture period. This paper was prepared on behalf of the International Council for Standardization in Haematology (ICSH).<sup>47</sup> It was only at e-First publication stage at the time of writing the previous editorial related to the 2020 Eberhard F. Mammen “Most Popular” articles award announcements.<sup>48</sup> Nevertheless, it rated high on the 2020 listing and I predicted it to be very difficult to beat for the 2021 “Most Popular” award.<sup>48</sup> The 2021 winner proves my prediction to be correct, despite some later “competition” by popular COVID-19-related papers.

As always, the listing also identified some older yet popular papers in ► **Tables 3** and **4** and thus indicates some topics of current interest that STH will likely revisit in forthcoming years.

It is certainly always of interest to see what captures the attention of the STH readership. Some topics and issues of STH, in particular, seem to catch a larger readership. This was certainly true of COVID-19 papers. STH published an issue on COVID-19 in 2020<sup>49</sup> and plans at least one issue in 2021. Indeed, most of the papers that appeared in the 2020 COVID-19 issue also appeared in the top 100 download list, as listed in ► **Table 5**. Notably, most of these papers were Commentaries, and thus do not qualify for the award. However, there were a couple of reviews included in the issue, and these would likely be qualifiers for the 2022 “Most Popular” award.

The other top-ranking issues of STH this round, from the aspect of having three or more papers appearing in the top 100 download list, and published in the past 5 years were: “Acquired Platelet Dysfunction-Laboratory and Clinical Implications.” (2020),<sup>50</sup> “Innovations in Thrombosis and Hemostasis: A Glimpse Towards the Future of Diagnostic

**Fig. 2** Robert C. Gosselin.

Analyzers.” (2019),<sup>51</sup> “Recent Advances in Thrombosis and Hemostasis-Part IV.” (2019),<sup>52</sup> “Editorial Compilation VI” (2019),<sup>53</sup> “Hemostasis in Exercise and the Athlete.” (2018),<sup>54</sup> and “Editorial Compilation V” (2017).<sup>55</sup>

It can be noted here that the latest “nonthemed” issues (into which primarily go the best of unsolicited manuscripts) were well represented as “leading” issues, according to this marker of “popularity.” This would help to vindicate the decision to progress such issues approximately every 8 months.

All authors of the award-winning articles were thrilled to hear that their papers had won an Eberhard F. Mammen “Most Popular” award, and provided their own personal responses to the news.

From Robert C. Gosselin (►**Fig. 2**), “on behalf of my coauthors, it is truly an honor to be bestowed two Eberhard F. Mammen “Most Popular” article awards. Dr Mammen had a particular fondness for teaching, especially laboratory technologists, which has inspired so many including myself to reach out and share our experiences. It is my belief that a significant feature for these awards is the acknowledgement that our colleagues yearn for these manuscripts that provide technical guidance, and thus we are immensely grateful to STH for their willingness to provide such a platform for these articles related to laboratory practice. I would also like to thank Siemens Healthcare Diagnostics for providing Dr. Marlar (►**Fig. 3**) and myself the inspiration to write the preanalytical variable manuscript, as well as the ICSH for providing support for the coagulation critical value manuscript.”

Richard A. Marlar (►**Fig. 4**) added, “I wish to thank the editors and staff of STH for awarding Bob Gosselin and myself the honor of an Eberhard F. Mammen “Most Popular” article award for our article on preanalytical variables. Dr. Mammen truly was gifted for teaching and mentoring. I knew him throughout my career from his classroom teaching while in graduate school at the start of my career to mentoring and helping me set my direction into coagulation laboratory science. Finally, he continued to advise and mentor throughout my career on many different topics. It is truly an honor for me to have worked and interacted with him and his family. Thanks must be also extended to Siemens Healthcare Diagnostics for providing the opportunity to write a review

**Fig. 3** Richard A. Marlar.

manuscript on preanalytical variables in coagulation. And for the willingness of the editors of this journal to review and then accept our manuscript. It is gratifying to know that our work was truly needed and hopefully has helped make coagulation laboratories better.”

It was very pleasing to see (open disclosure here: my friend and sometimes collaborator) Robert C. Gosselin win awards for these two reviews.<sup>2,3</sup> I recall the development of both these manuscripts, both appearing in separate issues in which I and another friend and sometimes collaborator, Prof. Giuseppe Lippi, guest edited.<sup>56,57</sup> Also of interest, Robert C. Gosselin was coauthor of a 2019 “Most Popular” award winning paper.<sup>58,59</sup> Also of interest, especially as a connection to Dr. Mammen, is that Robert C. Gosselin was a coauthor on one of Dr. Mammen’s publications appearing in STH in 1998.<sup>60</sup>

From Toshiaki Iba (►**Fig. 4**), speaking on behalf of all authors (also appearing in ►**Fig. 4**), “we are greatly honored to have received one of the Eberhard F. Mammen STH 2021 “Most Popular” article awards. Upon receiving the award, we must confess that the concept of disseminated intravascular coagulation (DIC) has not yet been integrated between the scientists and countries *per se*. DIC has perhaps become diffuse intercerebral confusion or disseminated intercontinental chaos. My wonderful colleagues Profs. Jerrold H. Levy and Marcel Levi and I have been worked on unifying the concept of sepsis-associated DIC and released the diagnostic criteria for sepsis-induced coagulopathy (SIC) in 2017. Since then, we are continuously working on expanding the “two-step approach (SIC to DIC)” to manage DIC in sepsis. Our future target is establishing an effective strategy for DIC. We also wish to clarify the difference and similarities between SIC and COVID-19-associated coagulopathy. We are extremely happy that we could introduce this process in this prestigious journal.”

From Jun Teruya (►**Fig. 5**), speaking also on behalf of his coauthors (also appearing in ►**Fig. 5**): “we were surprised, thrilled, and grateful to hear that our paper had won one of the 2021 Eberhard F. Mammen “Most Popular” awards for the “General Category.” We are pleased to know that our article entitled “Bleeding and Thrombotic Complications in the Use of Extracorporeal Membrane Oxygenation (ECMO)” was widely read by people who presumably manage patients on ECMO on a daily basis. Even with the advancement of recent technology, we still struggle with bleeding and

**Fig. 4** From left: Jerrold H. Levy, Toshiaki Iba, Marcel Levi.

**Fig. 5** From left: James Thomas, Vadim Kostousov, extracorporeal membrane oxygenation (ECMO) machine, Jun Teruya.

thrombosis during ECMO. We hope that our article was helpful to guide management of patients on ECMO. On a personal note, I was fortunate to attend Dr. Mammen's talk when he came to Tokyo, Japan, in the late 1980's. I was a resident at that time, but his talk convinced me to specialize in hemostasis as my career."

Also interesting is that several papers on the top listings were coauthored by previous Young Investigator Award winners, for example, the paper by Laridan et al,<sup>24</sup> which just missed out on a "Most Popular" award, being third on the list in ▶ **Table 4**. Elodie Laridan was a 2017 "Young Investigator" award winner,<sup>61</sup> and this paper represents the contribution submitted as part of the award. This also further helps to validate the "Young Investigator" awards process itself.

Also, perhaps notable is that several of the papers listed on the most popular tables are original studies,<sup>10,17,19,27</sup> or what I call "hybrid papers" (representing some original data and a review of the literature).<sup>12</sup> Given the current restrictive Publication Policy for original studies published in STH,<sup>62</sup> I find it interesting that four original studies published in 2019 appeared on the top 100 listing. In brief, STH publishes a maximum of 10 to 12 original studies per year, and these also require additional oversight with external to STH-board peer review. Nonetheless, that 4 of 11 original studies published in 2019 appeared in the top 100 seems to validate the Editorial Board's decision to continue to publish selected unsolicited

submissions of original studies. Of note, an original study also won one of the 2020 "Most Popular" awards.<sup>48,63</sup>

I would, as always, like to thank not only all of the authors listed in ▶ **Tables 2–5**, but also all the other contributing authors who didn't manage to make these listings, as well as all the many other guest editors of issues recently published in STH. I likewise look forward to seeing future listings, always a great pleasure and sometimes a surprise.
