In the article “Radiation Retinopathy 15 Years after Orbital Irradiation for Thyroid Orbitopathy” [1] we inadvertently submitted two angiographic images (Fig. 1 c and 1d) of another publication in the same issue [2]. The correct images are provided below. We regret any confusion caused by this error.

Fig. 1 Fundus color photography (a), horizontal SD-OCT section (b), and fluorescence angiography (c and d) of the 55-year-old patient presenting radiation retinopathy 15 years after treatment of thyroid orbitopathy.
