**Synthesis Alerts** is a monthly feature to help readers of *Synthesis* keep abreast of new reagents, catalysts, ligands, chiral auxiliaries, and protecting groups which have appeared in the recent literature. Emphasis is placed on new developments but established reagents, catalysts etc are also covered if they are used in novel and useful reactions. In each abstract, a specific example of a transformation is given in a concise format designed to aid visual retrieval of information.

**Synthesis Alerts** is a personal selection by:
Fabrice Anizon, Robert Chow, and Sukhjinder Uppal, Department of Chemistry, Leeds University.

Georg Thieme Verlag does not accept responsibility for the accuracy, content, or selection of the data.

\end{align*}
\]

1 example (yield 91%, %ee = 90%) is reported.

L-Proline / trans-2,5-Dimethylpiperazine

The title reagent pair catalyse the asymmetric conjugate addition of nitroalkanes to cycloalkenones.

\[
\begin{align*}
\text{Catalyst} \\
\text{NH} \text{CO}_2\text{H} \\
\text{A} \\
\text{NH} \text{NH} \\
\text{B} \\

\]

\[
\begin{align*}
\text{S. Hanessian, V. Pham} \\
\end{align*}
\]

15 examples (yields 30-88%, %ee = 62-93%) are reported.

C₂-Symmetric Zinc(II)-L-Phe-L-Phe Complex

Reagent A catalyses the enantioselective addition of dialkylzincs to aliphatic and aromatic aldehydes.

\[
\begin{align*}
\text{Catalyst} \\
\text{Ph} \\
\text{N} = \text{CPh}_2 \\
\text{A} \\
\text{OH} \\
\text{CH}_3 \\
\end{align*}
\]

\[
\begin{align*}
\text{B. D. Dangel, R. Poll} \\
\end{align*}
\]

4 examples (yields 27-80%, %ee = 86-96%) are reported.

7 examples (yields 35-90%, ∆ee = 70-96%) are reported.
### Mono Lithium Salt of (R,R)\((-\))\(N,N\)-Bis(3,5-di-tert-butylsalicylidene)-1,2-cyclohexanediamine ([R,R](-)-SALEN) Catalyst

The title reagent catalyses the asymmetric addition of trimethylalicyanide to aldehydes to afford TMS ethers of cyanhydrins.

- ![Chemical Structure](image)

13 examples (yields 64-99%, %ee = 0-97%) are reported.

### Grubbs' Catalyst Catalyst

The title reagent catalyses enyne metathesis of acetylenic boronates for the construction of cyclic-1,3-diathynylboronic esters.

- ![Chemical Structure](image)

9 examples (yields 65-95%) are reported.

### Bidentate N,P Ligand Ligand

Ligand A is applied in the palladium-catalysed asymmetric allylation and Heck reaction. A is from a new class of phosphine-oxazoline ligands, bearing a chiral phosphinothioimidoyl (P-donor) and an oxazoline (N-donor).

- ![Chemical Structure](image)

The synthesis of A and 2 examples of application (yields 91-100%, %ee = 93-94%) are reported.

### Lithium N-Trityl-N-(R)-1-Phenethylamide Reagent

The title reagent is a readily available and useful base for the enantioselective formation of chiral enolates from achiral ketones.

- ![Chemical Structure](image)

4 examples (yields 50-99%, %ee = 89-92%) are reported.

### (R)-2,2'-Bis[2-(trimethylsilyl)ethoxymeroxy]-1,1'-binaphthyl-Tin Tetrachloride Complex [(R)-BINOL-(SEM)₂SnCl₄] Reagent

The title reagent is used for the enantioselective Prins reaction (acetate-ene reaction) of trisubstituted alkenes to afford optically active homoallylic ethers.

- ![Chemical Structure](image)

4 examples (yields 75-92%, %ee = 73-84%) are reported.
### Sodium Bromate / Sodium Hydrosulphite

The title reagent pair is used for the chemoselective cleavage of benzyl ether protecting groups in the presence of benzyloxycarbonyl functions.

<table>
<thead>
<tr>

N. S. Barta, D. R. Sidler, K. B. Somerville, S. A. Weissman, R. D. Larsen, P. J. Reidar Org. Lett. 2000, 2, 2821. 8 examples (yields 28-81%, 50-98%) are reported.
(Trimethylsilyl)tributylstannane

The title reagent mediates the cyclisation of 1,6-dynes to afford chiral (Z,Z)-1,3-dienes. The helical chirality in 1,4-disubstituted (Z,Z)-1,3-dienes is demonstrated.
