

ERRATUM

Unfortunately, some details on drug treatment of Parkinson patients were inadvertently omitted in the article by *G. Oepen et al.*, published in No. 6 (1985), page 343, entitled "Piracetam Improves Visuomotor and Cognitive Deficits in Early Parkinsonism – A Pilot Study". The omitted

paragraph reads as follows: "The patients continued their drug regimen unchanged. In addition, they received 7 g piracetam per day (5/2/0 g). After the first examination, piracetam was administered orally in liquid form."
