Thermal and Au(I)-Catalyzed Intramolecular [4+2] Cycloaddition of Aryl-Substituted 1,6-Diynes for the Synthesis of Biaryl Compounds

Takanori Shibata,* Ryo Fujiwara, Daisuke Takano *Synlett* **2005**, 2062–2066.

In the original article the mechanism of the reaction given in Table 2 (incorrect original shown below) was misinterpreted as Au(I)-catalyzed [4+2] cycloaddition. Further investigation, which was stimulated by Lian et al.,¹ revealed that it is a [3+2] cycloaddition that leads to the main product **3a**.

The structures of compounds **3a,d,e**, **i–l**, and **3o'k,l** [$\text{Z} = \text{CH}_2$, $\text{C}(\text{CO}_2\text{Et})_2$, NTs] in Tables 2 and 3 were misinterpreted and the correct structures are shown below.

The structure of **3e** ($\text{Z} = \text{NTs}$) was ascertained by X-ray measurements (CCDC 618808).
