ABSTRACT

Materials and Methods: The publications of year 2013 of JOSH Diabetes were analyzed. Total no. of articles published, type of articles, their authorship, and the coverage of various subspecialties were studied. The publications were also classified as being of Indian or foreign origin and from academic or non-academic institutions depending upon the institution of first author. **Results and Conclusions:** A total of 2 issues of JOSH Diabetes were published in 2013, including a total of 28 publications. Review articles and methodological issues in social health and diabetes research were published maximally. All the subspecialties were covered well, maximum being ethnography. Both academic and non-academic institutions have contributed almost equally towards this journal. The journal has been able to attract the interest of the foreign authors as well. Articles from all parts of the country have been published in JOSH Diabetes, but Haryana has contributed maximally.

Key words: Bibliometric analysis, psychosocial aspects of diabetes, publications

INTRODUCTION

The psychosocial aspects of diabetes (PSAD) care are a very important part of diabetology.^[1] The assessment and management of general, psychological, psychiatric, and social factors hugely impacts glycemic control in patients.^[2] But sadly, this specialty of diabetes has not received enough attention as yet. Concentrated, sustained, and efficient team work involving all health care professionals and stakeholders is necessary for the growth of this field. Journal of social health and diabetes is dedicated towards this goal.

JOSH-Diabetes is an applied, internationally oriented diabetes sociology journal designed to help policy makers,

academicians, social activists, and researchers stay in touch with the social and psychological issues pertaining to diabetes management. It spreads knowledge about best practices for managing diabetes at the grass root level and encourages innovative research in the field of social aspects of diabetes management.

The article aims at performing bibliometric analysis of JOSH Diabetes, which is a peer-reviewed, semi-annual online journal published by Novo Nordisk Education Foundation (NNEF). This foundation is working to improve the social and psychological environment of people with diabetes, through research, training, and community programs. The journal publishes editorials, reviews, methodological issues in social health and diabetes research, original articles, brief communications, short reports, and letters related to social and psychological issues of diabetes management.

MATERIALS AND METHODS

JOSH Diabetes issues of the year 2013, which were available online, were taken for analyzing the publication trends in this journal. The data was derived from the website of the journal, which gives link to the previous issues.

The articles published were analyzed for the type of the articles (editorials, review articles, original articles, methodological issues in social health and diabetes research, brief communications, short reports, and letters to the editor). Certain types of articles which appear infrequently were clubbed with larger categories, for ease of analysis. Methodological issues in social health and diabetes research were grouped with review articles. Brief communications and short reports were clubbed together.

The categorization of articles according to the subspecialties was made and modified in consultation with the editor. The articles were divided into 8 major groups, namely ethnography, health care provision and guidelines, qualitative research, clinical diabetology, psychiatry, TPE (therapeutic patient education), KAP (knowledge, attitude and practice), and bibliometry. Divergent opinion was resolved by consensus between authors.

The articles were later categorized as being of Indian or foreign origin, and from academic or non-academic institutions depending upon the institution of the first author. The articles were also divided according to the state of origin.

RESULTS

In year 2013, two issues of JOSH Diabetes were published comprising a total of 28 publications. These included

Table 1: Number of articles published in JOSH Diabetes in 2013

	July-Dec 2013	Jan-June 2013	Total
Editorials	2	2	4
Review articles and methodological issues	6	5	11
Original articles	4	1	5
Brief communications and short reports	2	4	6
Letter to the editor	2	0	2
Total	16	12	28

Table 2: Subspecialty coverage in JOSH Diabetes in year 2013

Subspecialties	Editorials	Review articles and methodological issues	Original articles	Brief communications and short reports	Letter to the editor	Total
Ethnography	0	5	0	3	1	9 (32%)
Health care provision and guidelines	2	2	1	2	1	8 (29%)
Qualitative research	0	2	1	0	0	3 (11%)
Clinical diabetology	1	1	0	1	0	3 (11%)
Psychiatry	1	1	0	0	0	2 (7%)
TPE (therapeutic patient education)	0	0	1	0	0	1 (3%)
KAP (knowledge, attitude, and practice)	0	0	1	0	0	1(3%)
Bibliometry	0	0	1	0	0	1(3%)
Total	4	11	5	6	2	28

4 editorials, 11 review articles and methodological issues, 5 original articles, 6 brief communications and short reports, 2 letters to the editor. There were a total of 12 publications in Jan-June issue, which rose to 16 in July-Dec issue. Review articles and methodological issues in social health and diabetes research have been published maximally [Table 1].

The publications of JOSH Diabetes covered many subspecialties. Maximum coverage (32%) was received by ethnography followed by health care provision and guidelines (29%) [Table 2 and Figure 1].

A very good contribution by the foreign countries was made towards the journal in both July-Dec 2013 (37.5%) and Jan-June 2013 (41.66%) issue. The countries who got their work published in JOSH Diabetes were USA, China, Denmark, Nigeria, Egypt, Nepal, Qatar, Tunisia, and Pakistan [Table 3].

Slightly more contribution has been received from academic (53.57%) sector as compared to non academic (46.42%) sectors in year 2013.

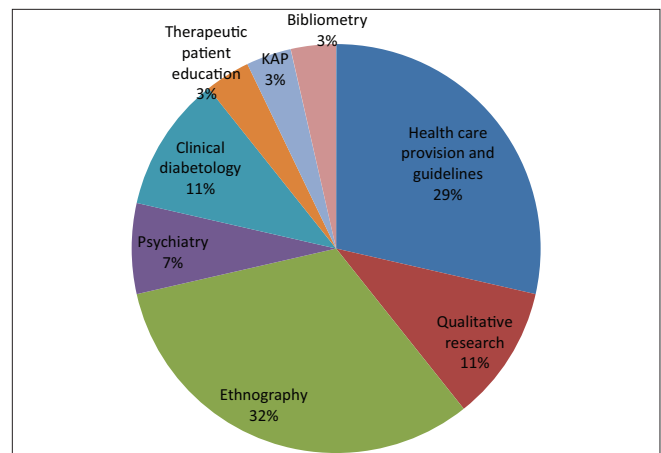

Figure 1: Graphical representation of subspecialty coverage in JOSH Diabetes in 2013

A total of 9 states and union territories from different parts of India have contributed their share towards this journal in its initial year. Maximum publications were received from Haryana (29%) followed by Karnataka (17%) [Figure 2].

DISCUSSION

This bibliometric study has tried to assess and analyze the publication trends of journal of social health and diabetes (JOSH diabetes). It is a new journal dedicated towards the dissemination of knowledge of psychosocial aspects of diabetes (PSAD). The journal is handling a nascent field of medicine, which unfortunately was untouched

till now. It adds a new psychosocial angle to conventional clinical medicine like American diabetes association and European association for study of diabetes (ADA/EASD) guidelines, and to critical care. JOSH Diabetes is a truly international journal, which is receiving attention and enthusiasm from many continents like America, Africa, rest of Asia, and Europe. A lot of researchers around the globe have shown interest in the journal as seems evident by the multi-author, multi-institutional, and multi-country nature of articles. The journal has an open editorial policy as suggested by lot of published original research articles, inclusion of articles from all over the country, and very good coverage of all subspecialties. Highest contribution towards the journal has been done by Haryana. Non-academic sector has also shown much enthusiasm in this journal. In nutshell, JOSH Diabetes is one of the few biomedical journals to accept and promote qualitative research.

Table 3: Indian vs. foreign publications of JOSH Diabetes in year 2013

	July-Dec 2013		Jan-June 2013	
	Indian	Foreign	Indian	Foreign
Editorials	2	0	2	0
Review articles and methodological issues	2	4	2	3
Original articles	4	0	1	0
Brief communications and short reports	1	1	2	2
Letter to the editor	1	1	0	0
Total (%)	10 (62.5%)	6 (37.5%)	7 (58.33%)	5 (41.66%)

CONCLUSIONS

The bibliometric analysis proves that JOSH Diabetes is working well to spread light on the expanding horizons of diabetes management. It is hoped that the journal is able to impart the much desired attention to the psychosocial aspects of diabetes (PSAD) care.
